

Practical Management for Career Readiness

Effective Problem Solving and Decision Making Module 2

with Rob Stone, M.Ed., PMP

Histogram

Histogram

A graphical display where the data is grouped into ranges and each bar is plotted as a range of data

Histogram

Shows us information as it actually exists

Allows us to make decisions based on
evaluation of available information

Helps us examine what is going on

A histogram displays:

Shape

Central Tendency

Dispersion

Shape

The frequency in which the data occurs in each class interval will determine the shape of the histogram

Histogram

Shape

Skewed Right

Skewed Left

Uniform

Bell Shaped

Shape: Skewed Right

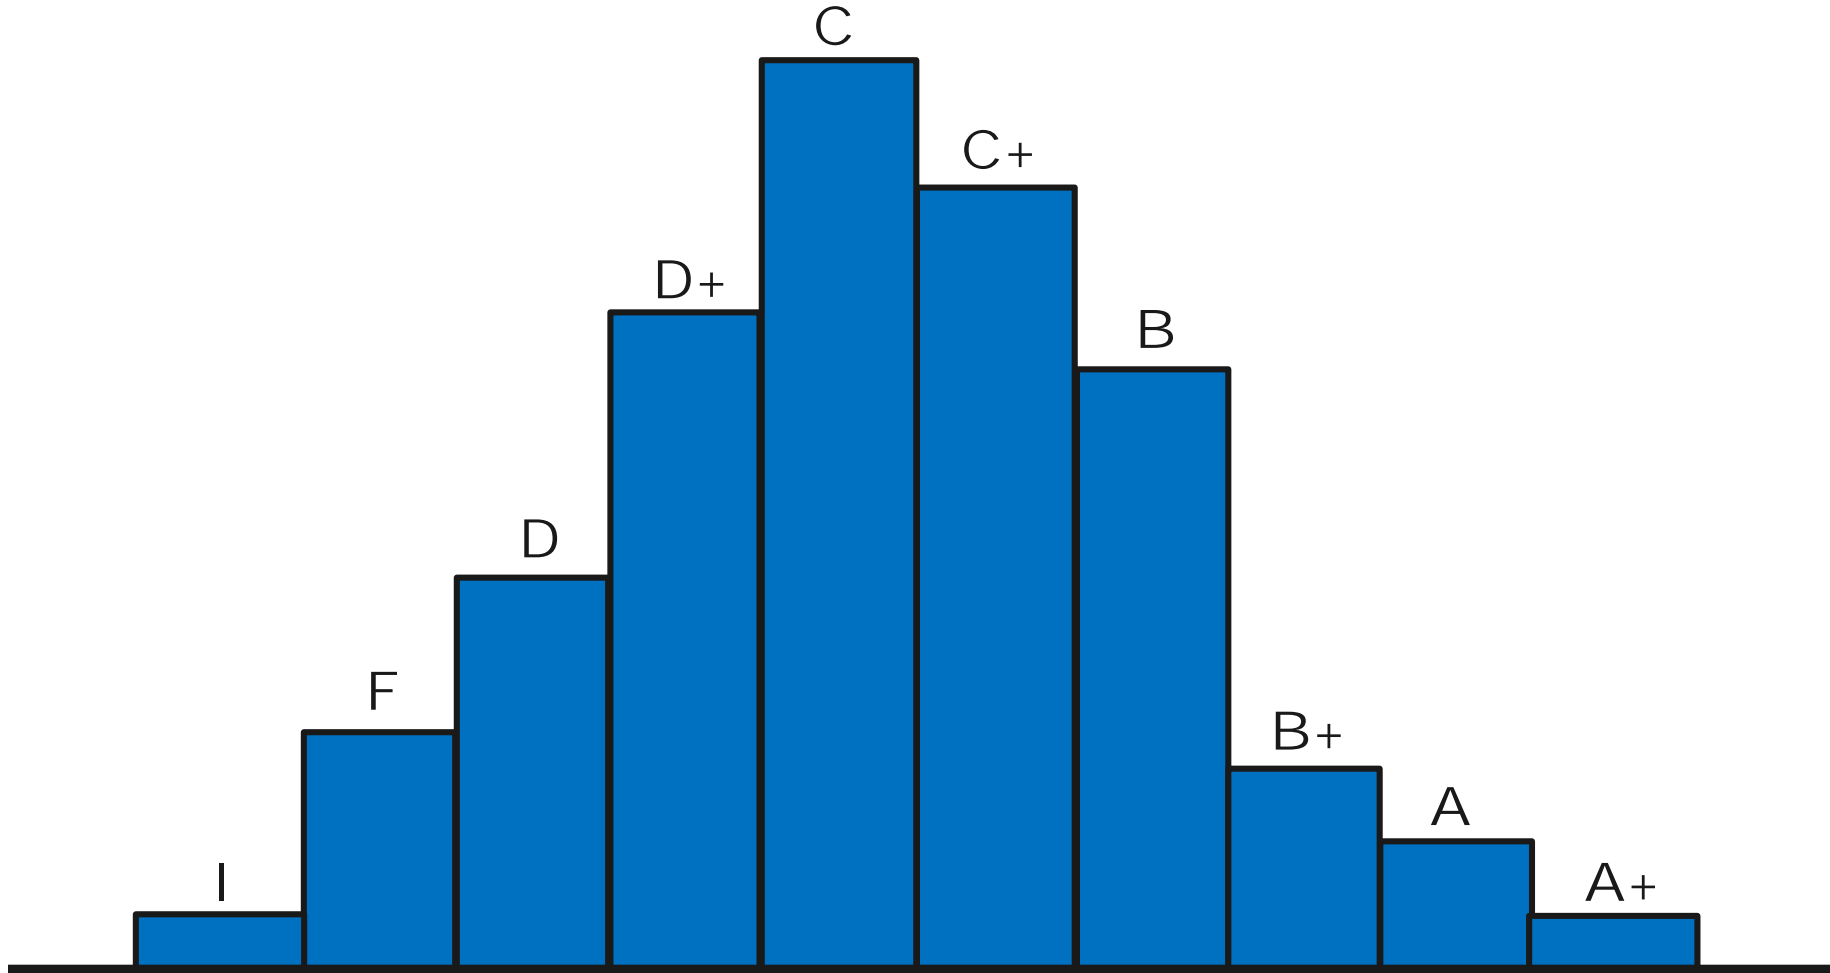

Shape: Skewed Left

Shape: Uniform

Shape: Typical Bell Curve

Central Tendency

Lower and Upper Specification Limits

Central Tendency

Central Tendency: Normal Curve

Central Tendency

Shows us how the data tend to cluster around a particular value

Three Measures of Central Tendency

Mean

Median

Mode

Three Measures of Central Tendency

$$\text{Mean} = \frac{\text{Sum of all the measurements}}{\text{Total number of measurements}}$$

Three Measures of Central Tendency

The median divides the data into two equal parts

Three Measures of Central Tendency

```
graph TD; A[Three Measures of Central Tendency] --- B[Mean]; A --- C[Median]; A --- D[Mode]
```

Mean

Median

Mode

The value with the highest frequency

Easiest to identify

The least useful measure

Dispersion

Voice of the Process Data

LSL

USL

Voice of the Customer: "Specific Limitations"

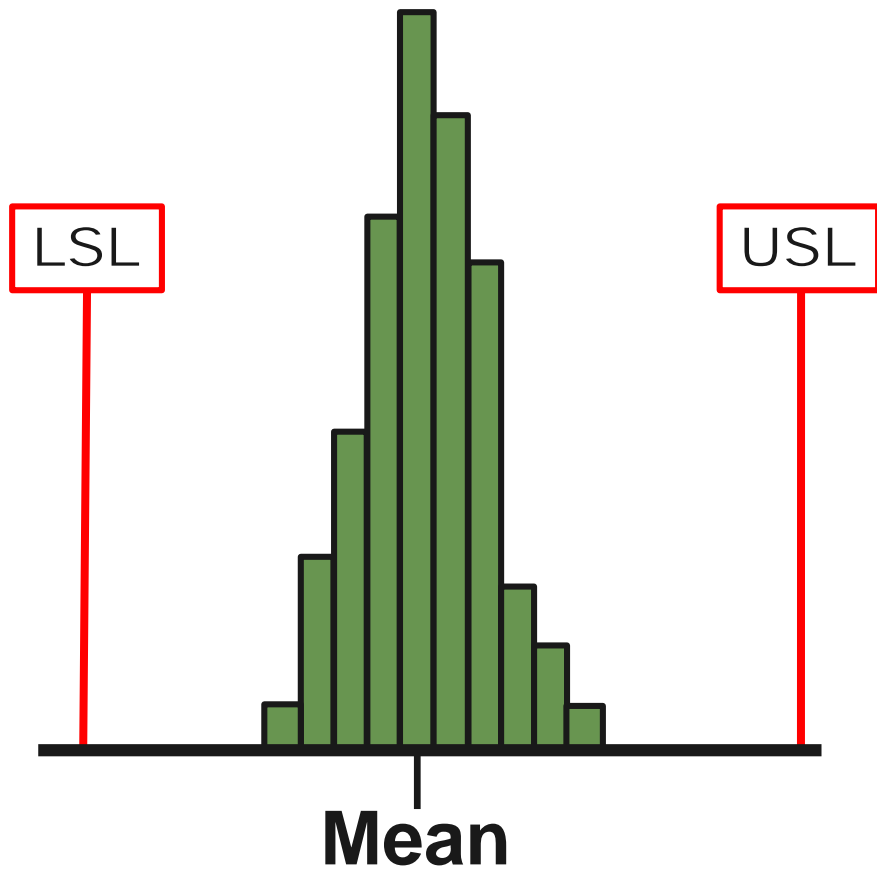

Dispersion: Standard Deviation

A typical distance from the mean

Dispersion

Group A

Group B

Value of Histograms

The three measures of

- Shape
- Central tendency
- Dispersion

... can help us make decisions and take effective actions.
